

# Academic Honesty

(The Short Short Version)

# What to avoid

- Don't reuse work
  - Your own (previous semester, previous course) without permission.
  - From others!
  - Content from web should be cited.
- A helper who hands you a solution is no help at all.
  - Get help by having someone look at your code and help you work through the problem.
- You CAN:
  - Use any code I publish this semester without citing.
  - Look at another student's work to help *them*.

# AI Tools

- AI OK to support your learning, and coding
  - OK to have it auto-complete a couple lines of code that you can write.
  - OK to ask it to explain code, or help find a bug.
- You must be the primary brain involved!
  - You must do the design.
  - You must be able to write the code that it does.
- If used, you must cite it for the code it writes.
  - In some ways, AI is automated plagiarism:  
If it writes enough of your code to be too similar to others, then you are responsible for the academic dishonesty.
- No AI tools on quizzes!
